

# ServiceHub: An Information Platform for Kainakap Services

# Introduction

The Kainakap Foundation, dedicated to supporting Persons with Disabilities (PWDs), faces significant challenges in its operational processes. One of the primary issues is the absence of an information platform for PWDs to submit their requests and inquiries. This lack of structured communication results in insufficient feedback from PWDs, leading to unaddressed needs and blind operational execution. Additionally, the foundation struggles with identifying the specific needs for assistive equipment due to a shortage of personnel for home visits and assessments. This personnel limitation causes delays in delivering necessary assistive equipment and support, adversely affecting the quality of care provided.

# General Objectives

**The overarching objective of this initiative is to establish an inclusive and accessible service hub, tailored specifically to address the needs of Persons with Disabilities (PWDs) and enhance their overall well-being. Through the implementation of innovative strategies and technologies, our aim is to achieve the following:**

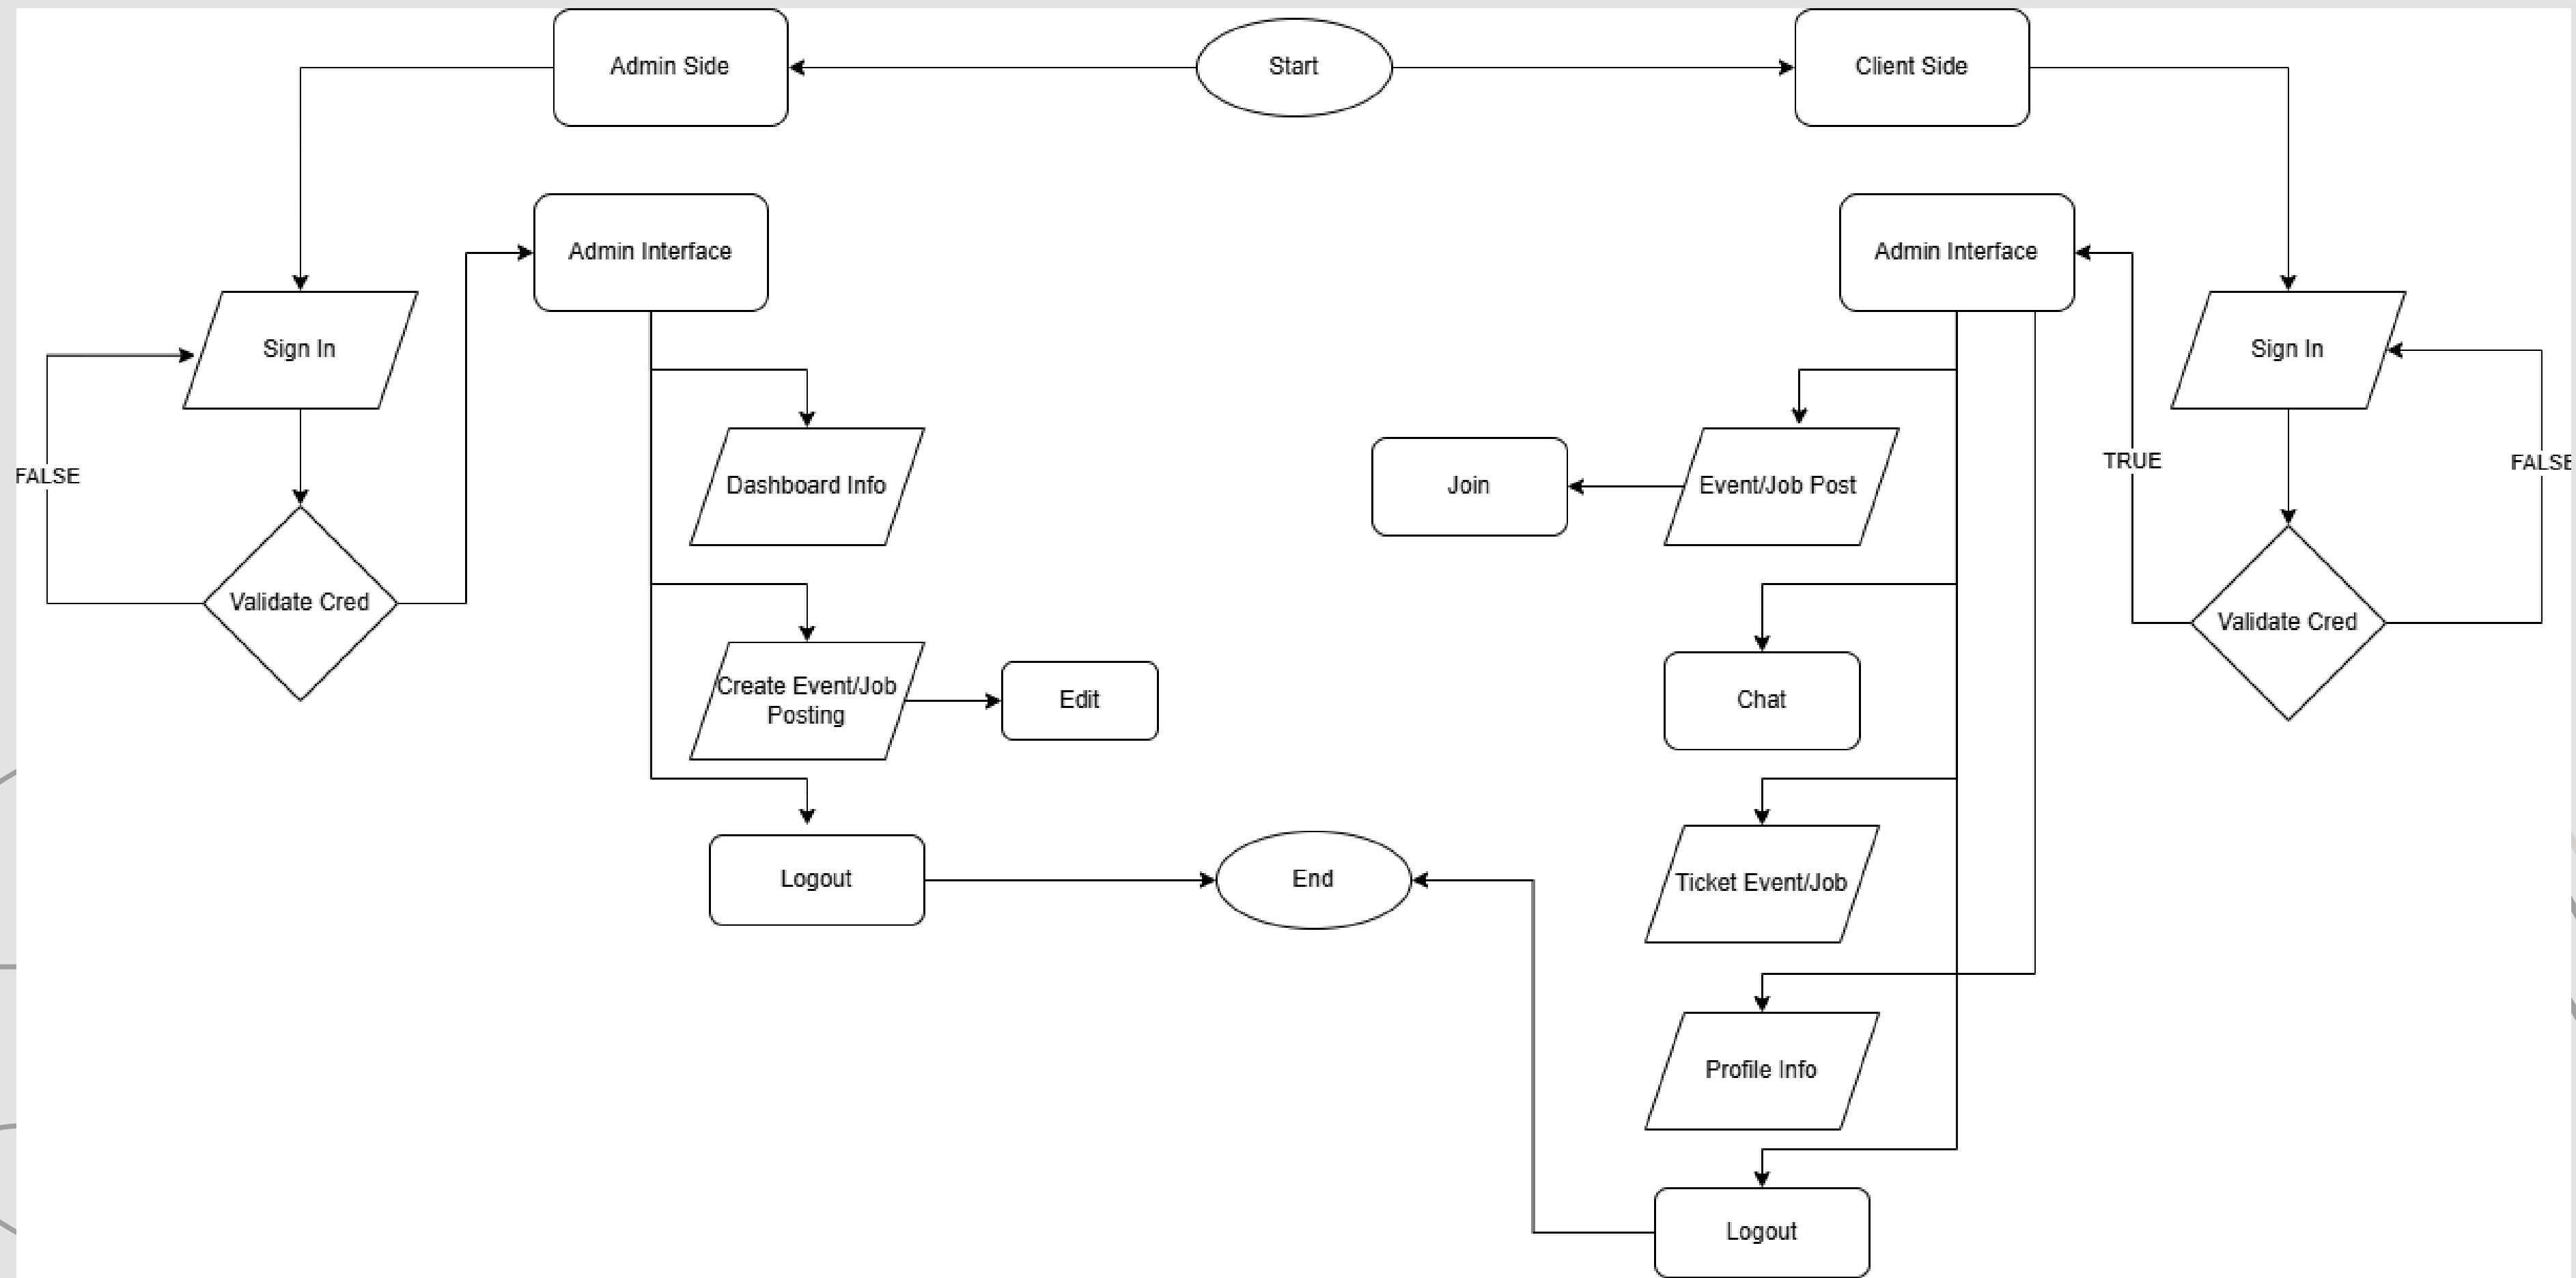

# Specific Objectives

- **Facilitate Communication Channel:** Develop and implement a user-friendly channel for PWDs to submit requests and inquiries, ensuring accessibility and inclusivity in all communication processes.
- **Optimize Assistive Equipment Provision:** Conduct thorough assessments to accurately identify the assistive equipment needs of PWDs, and establish efficient mechanisms for procurement, distribution, and maintenance of such equipment.
- **Promote Community Engagement:** Utilize a mass information platform to disseminate awareness about events, activities, and resources relevant to PWDs, boosting community engagement and participation.
